

Professional Statement

My name is Avin. As an aspiring cybersecurity professional, I have the necessary set of skills, mindset, and motivation to help me get started.

1. Strengths and Commitment for Cybersecurity

- Fundamentals in Networking, Troubleshooting of Hardware/Software, Configuring infrastructures/platforms, and Programming languages such as Python, JavaScript, and Java.
- A tinker, motivated, and self-starter mindset, I have this tendency to learn a tool or object that requires/pique my interest because it is unique.
- Strong written and great verbal communication skills. I have knowledge in written technical reports, audits, manuscripts, documentations, and communicated details properly related to organizational work and tasks as a professional.

2. Values

What motivates me as an individual is to become a skilled cyber defender against attackers. Here are my reasons why:

- First, since the country I live in suffers from data breaches and vulnerability attacks, it's a wake-up call to reinforce our infrastructure/software to help prevent or mitigate attacks to a minimum to prevent leakage of sensitive data.
- Second, this field offers a high salary, exposure to different vulnerabilities/attacks/exploitations, and continuous learning that is vital for my brain to be adaptive against these threats. With the use of AI agents (still needing human intervention), the work in this field will yield high ROI in the near future.

3. The Love for Security

What interests me about the field of cybersecurity is the number of roles available in this field: GRC, Cybersecurity Engineer, Information Security Analyst, Threat Intelligence, and a lot more, which is perfect for me. You have to hone your skills and learn tools along the way, which is the exciting aspect of this field.

As for the reason why I made this statement is dedicated to cybersecurity recruiters from LinkedIn, Indeed, and more platforms that would help me get started in this field. The details that I stated here would highly support the security goals of organizations: collaboration, integrity, honesty, and authenticity of the role and responsibility. I always keep in mind that I, alongside like-minded starters and professionals in this field, am the first and last line of defense/offense against cyberthreats. So I'll contribute no matter what for the safety of everyone in the digital age.
